Education

Amity University

M.Sc Data Science (CGPA: 9.96/10)

India

Sept. 2020 — Jun. 2022

Sardar Patel University

B.Sc Computer Application and Information Technology (CGPA: 8.6/10)

India

Jun. 2017 — Oct. 2020

Technical Skills

Programming Languages: Python, Go, R, Java, JavaScript, C/C++, SQL, NoSQL

Data Engineering: PySpark, Hadoop, Sqoop, Databricks, Snowflake, Data Pipelines

Machine Learning & AI: TensorFlow, PyTorch, JAX, LangChain, RAG, LLM, NLP, Model Deployment

Data Science & Analytics: Data Analysis, Time Series, Regression Analysis, Hypothesis Testing, Predictive Modeling, Model Tuning

Cloud & DevOps: AWS, Azure, Docker, Git, FastAPI, Flask, WatsonX

Experience

Data Engineer

IBM

Jun. 2022 — Present

Pune, India

- Designed and owned distributed batch and streaming data pipelines using **Spark, Snowflake, and Databricks**, processing **2TB+ data** with **99.9% pipeline reliability**.
- Built scalable ingestion frameworks supporting real-time and scheduled workloads, reducing end-to-end processing latency by **60%**.
- Engineered high-performance **REST APIs in Go and Python** to serve curated datasets to **50+ data scientists** and analytics teams.
- Implemented **CI/CD pipelines**, automated data validation, and monitoring frameworks, reducing deployment failures and data quality issues by **35%**.
- Contributed to enterprise **AI platform development** supporting large-scale **ML and LLM workloads**, including **RAG-based document processing pipelines**.

Data Science Intern

MindWorks Global

Jun. 2021 — Sept. 2021

Delhi, India

- Built an interactive analytics platform using **React and D3.js**, reducing dashboard creation time from **4 hours to under 20 minutes** and improving analyst productivity by **25%**.
- Processed and analyzed **500K+ records** using **Python** and custom APIs to generate insights for client-facing reports integrated into production CMS workflows.

Software Analyst / Trainee

TCS

Aug. 2020 — Oct. 2020

Ahmedabad, India

- Architected and tested backend APIs supporting enterprise microservices across **three production applications**.
- Contributed to payment processing systems using **Java, Python, and Node.js**, improving transaction throughput and reducing latency by **10%**.
- Collaborated with QA and engineering teams to validate service reliability and production readiness.

Projects

Thallus: Simulation Engine

- Architected an **AI-driven Decision Intelligence platform** that autonomously models narrative spread and behavioral outcomes using multi-agent simulations, enabling stress-testing of complex social and organizational dynamics.
- Designed the core pipeline combining **knowledge graph construction**, automated ontology derivation, and **AI persona synthesis** from unstructured source documents to generate realistic digital ecosystems.
- Implemented **advanced analytics engines** including scenario comparison, multi-agent debate workflows, and visual dashboards for tracking narrative propagation and extracting actionable intelligence from simulation data.

Vector: Enterprise-Level RAG Solution

- Designed and built a **professional-grade AI platform** enabling collaborative and secure **session-based conversations** with integrated real-time web searching, historical chat management, and document uploading capabilities.
- Implemented **enterprise-scale permission architecture** using access groups and role-based access controls, enabling secure knowledge base curation and organizational data governance with end-to-end protection.
