Summary

Software Engineer with a proven track record of designing, developing, and deploying scalable, high-performance systems. Experienced in building distributed data platforms, low-latency APIs, and enterprise-grade AI/ML solutions. Passionate about leveraging cutting-edge technologies to solve complex problems and drive business impact.

Experience

Data Engineer

Jun. 2022 — Present

IBM

Pune, India

- Designed and delivered scalable, distributed data processing systems using **Spark, Snowflake, and Databricks**, processing over **2TB of data daily** with **99.9% pipeline reliability**.
- Engineered a low-latency data ingestion framework for real-time and batch workloads, reducing end-to-end processing time by **60%** and improving data freshness for downstream services.
- Designed and developed high-performance, fault-tolerant **REST APIs in Go and Python**, serving curated datasets to over **50 data scientists** and enabling mission-critical analytics applications.
- Led the implementation of **CI/CD pipelines**, automated testing, and observability frameworks, resulting in a **35% reduction** in deployment failures and data quality incidents.
- Developed core components for an enterprise **AI platform** supporting large-scale **ML and LLM workloads**; productionized **RAG-based document processing pipelines** for enhanced information retrieval.

Data Science Intern

Jun. 2021 — Sept. 2021

MindWorks Global

Delhi, India

- Developed a full-stack analytics platform using **React, D3.js, and Python**, enabling rapid dashboard creation and reducing manual reporting time from hours to minutes.
- Engineered data processing APIs to analyze **500K+ records**, delivering key insights for client-facing reports and increasing user engagement by **25%**.

Software Analyst / Trainee

Aug. 2020 — Oct. 2020

TCS

Ahmedabad, India

- Developed and tested backend APIs for enterprise microservices, contributing to payment processing systems in **Java, Python, and Node.js** and improving transaction throughput by **10%**.

Projects

Vector: An Enterprise-Ready, Scalable RAG Platform

- Architected and developed a secure, multi-tenant AI platform for **Retrieval-Augmented Generation (RAG)**, featuring session-based conversations, real-time web search, and chat history.
- Engineered a fine-grained, role-based access control (RBAC) system for managing knowledge bases, enabling secure document uploads, indexing, and data governance across the enterprise.
- Built with a microservices architecture using **Go and Python**, deployed on **Docker** and orchestrated with **Kubernetes** to ensure scalability and high availability.

Pluto: A No-Code Machine Learning Platform

- Designed and built a full-stack web platform that allows users to train ML models via a drag-and-drop UI, abstracting away the underlying code complexity.
- Implemented a modular backend for workflow orchestration, handling dataset ingestion, model versioning, and distributed training job management.

Technical Skills

Languages: Python, Go, Java, R, JavaScript, C++, SQL

Technologies: Distributed Systems, Microservices, System Design, REST APIs, CI/CD

AI/ML: PyTorch, TensorFlow, JAX, LangChain, LLMs, RAG, NLP, Vector Databases

Data Platforms & Cloud: Spark, Databricks, Snowflake, AWS, Azure, Docker, Kubernetes

Education

Amity University

India

M.Sc Data Science (CGPA: 9.96/10)

Sept. 2020 — Jun. 2022

Sardar Patel University

India

B.Sc Computer Application and Information Technology (CGPA: 8.6/10)

Jun. 2017 — Oct. 2020
