Education

Amity University

M.Sc Data Science (CGPA: 9.96/10)

India

Sept. 2020 — Jun. 2022

Sardar Patel University

B.Sc Computer Application and Information Technology (CGPA: 8.6/10)

India

Jun. 2017 — Oct. 2020

Experience

Data Engineer

Jun. 2022 — Present

IBM India

India

- Designed and owned distributed batch and streaming data pipelines using **Spark, Snowflake, and Databricks**, processing **2TB+ data** with **99.9% pipeline reliability**.
- Built scalable ingestion frameworks supporting real-time and scheduled workloads, reducing end-to-end processing latency by **60%**.
- Developed high-performance **REST APIs in Go and Python** to serve curated datasets to **50+ data scientists** and analytics teams.
- Implemented **CI/CD pipelines**, automated data validation, and monitoring frameworks, reducing deployment failures and data quality issues by **35%**.
- Contributed to enterprise **AI platform development** supporting large-scale **ML and LLM workloads**, including **RAG-based document processing pipelines**.

Data Science Intern

Jun. 2021 — Sept. 2021

MindWorks Global

India

- Built interactive analytics and visualization platform using **React and D3.js**, reducing dashboard creation time from **4 hours to under 20 minutes**.
- Processed and analyzed datasets with **500K+ records** using **Python** and custom APIs to generate insights used in client-facing reports.
- Integrated visualization framework into production CMS workflows, improving analyst productivity and increasing client engagement by **25%**.

Software Analyst / Trainee

Aug. 2020 — Oct. 2020

TCS

India

- Developed and tested backend APIs supporting enterprise microservices across **three production applications**.
- Contributed to payment processing systems using **Java, Python, and Node.js**, improving transaction throughput and reducing latency by **10%**.
- Collaborated with QA and engineering teams to validate service reliability and production readiness.

Projects

pluto: No Code ML Training Platform

- Built a **no-code web platform** for training machine learning models with modular workflow orchestration, enabling model training without scripting.
- Integrated automated dataset ingestion, model selection UI, and training job management backend.
- Used **JavaScript, Node**, and custom orchestration logic to support extensible **ML pipelines**.

Blood Cell Detection using YOLO V8

- Developed object detection pipeline using **YOLO V8** on blood cell datasets with improved accuracy and inference performance.
- Compared YOLO V8 with **R-CNN baseline**, analyzing precision, recall and inference speed metrics.
- Packaged training and evaluation into reusable **Python workflows** for reproducibility.

Technical Skills

Programming Languages: Python, R, JavaScript, Go, Java, C/C++, SQL, NoSQL

Data Science: TensorFlow, PyTorch, PySpark, Hadoop, Sqoop, Flask, FastAPI, Docker, Data Analysis, Time Series, Regression Analysis, Machine Learning, Model Tuning, Hypothesis Testing, Predictive Modeling

AI & Machine Learning: LangChain, JAX, RAG Systems, WatsonX, Large Language Models, Natural Language Processing, Deep Learning, AI Model Deployment

Tools & Technologies: Git, Arduino, Raspberry Pi, Azure, AWS, Snowflake, Databricks, Docker
